Summary

I'm a Computer Science student working at the intersection of Artificial Intelligence, Cybersecurity, and Computational Biology. My work centers on building secure, intelligent systems—from designing deep learning frameworks for spatial proteomics to developing resilient, offline-capable security models. I focus on high-impact research problems and backend logic, using my applied full-stack and mobile development skills (React, Laravel, Flutter) as functional tools to integrate machine learning models, secure data pipelines, and user interfaces into working systems. Core Focus & Toolkit: AI & Bioinformatics: Deep Learning (CNNs), Spatial Proteomics, Data Harmonization Pipelines, Python, PyTorch Cybersecurity & Systems: Resilient Network Architectures, Offline-First Security Frameworks, System Design (UML) Applied Development: React, Laravel, Database Systems (SQL, Firebase, SQLite), REST APIs Always open to collaborating on AI research, cybersecurity initiatives, computational biology projects, or specialized software engineering.
